REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

Claims 30-63 are allowed over the references of record because none of these references disclosed or can be combined to yield the claimed invention including a clear contact for the removal of charge carriers from an inner gate region that extends at least partially up to the clear contact, as recited in claim 30.

The closest prior art is NEESER ET AL: "DEPFET- a pixel device with integrated amplification" NUCLEAR INSTRUMENTS & METHODS IN PHYSICS RESEARCH, SECTION - A: ACCELERATORS, SPECTROMETERS, DETECTORS AND ASSOCIATED EQUIPMENT, NORTH-HOLLAND PUBLISHING COMPANY. AMSTERDAM, NL, vol. 477, no. 1-3, 21 January 2002 (2002-01-21), pages 129-136, XP004345526 ISSN: 0168-9002. It discloses a semiconductor structure comprising a weakly doped semiconductor substrate of a first (n) doping type, a highly doped drain region ("drain") of a second (p) doping type located at a first surface of the semiconductor substrate, a highly doped source region ("source") of the second (p) doping type located at the first surface of the semiconductor substrate, a channel ("p-channel") extending between the source region ("source") and the drain region ("drain"), a doped inner gate region ("internal gate") of the first (n) doping type, located in the semiconductor substrate, at least partially below the channel ("p-channel"), and a clear contact ("clear") for the removal of charge carriers from the inner gate region ("internal gate"). Note figures 1 and 2 of Neeser et al.

Art Unit: 2826

However, claim 1 further requires that the inner gate region extend at least partially up to the clear contact. Such a feature is not known from Neeser et al. (although it is shown in Applicants' figures 1a and 1b, where inner gate region IG extends up to, and overlaps, clear contact CL). The subject matter of claim 1 is therefore novel. The arrangement of the semiconductor structure of claim 1 makes it possible to clear the signal electrons that have accumulated in the inner gate region IG by means of a low electrical voltage, with the result that the power and efficiency of the semiconductor structure are improved. Therefore, Neeser et al. neither discloses nor suggests the subject matter of claim 1.

2. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
